

1. <https://github.com/OpenRefine/OpenRefine/issues/7330> This issue was tagged with “Good First Issue”, and reading through the request, it seems possible for our team to figure it out. It appears one or two people may have looked at it already, but nothing has been submitted yet, and judging from what is being requested, a lot of classes may need to be changed.
2. <https://github.com/OpenRefine/OpenRefine/issues/7725> This issue is one part of a two part request. Luckily, the part that has not been complete is replacing a section of the code we studied, specifically the clustering part. It’s a bit complex because it might involve changing multiple files in order to update the current clustering option, but might be possible for our team to complete.
3. <https://github.com/OpenRefine/OpenRefine/issues/7632> I think out of all 3 of the issues, this issue is probably the most doable. It’s slightly outside the scope of the “Create Project” functionality we studied, but it’s close enough I believe it might be possible for our team to figure out.
