

INSIDE the Boundary:

1. BinningClusterer.java: it is in the clustering package and use keying algorithm to divide different key values.
2. clustering-dialogjs: it is clustering interface.
3. ComputeClustersCommand.java: it will serialize the clustering result into JSON.

OUTSIDE the Boundary:

1. Project.java: clustering need to read the data in Project.
2. Cell.java: it stores the primitive value.
3. History.java: when user click Merge Selected, the system will produce a Change objective and store into History.
